Ho-Ho-Kus, NJ 07423

Re: Water Quality Testing

Dear Members of the Community of ECLC of New Jeresy:

ECLC of New Jersey is committed to protecting student, teacher, and staff health. To protect our community and to comply with the Department of Education regulations, our HoHoKus school tested our schools' drinking water for lead.

Testing indicated levels in our school within the limits deemed safe. However, we also tested water sources in the basement of the St. Luke's parish center, since we occasionally utilize the basement gym for our activities. Two sinks – **but no water fountains used for drinking purposes** – in this basement area indicated levels above the maximum permitted.

In accordance with the Department of Education regulations, ECLC's HoHoKus Campus has implemented remedial measures for the four sinks with a result greater than the action level of 15 µg/l (parts per billion [ppb]). Because these water sources must remain on for non-drinking purposes, we have identified these water outlets with signs reminding students and staff that they should not be used for drinking purposes. In these cases, a "DO NOT DRINK – SAFE FOR HANDWASHING ONLY" have been posted.

Testing Results

Following instructions given in technical guidance developed by the New Jersey Department of Environmental Protection, we completed a plumbing profile for each of the buildings accessible to students of our HoHoKus campus. Through this effort, we identified and tested all drinking water and food preparation outlets. Of the forty (40) samples taken, all but the four (4) sinks discussed above have tested below the lead action level established by the US Environmental Protection Agency for lead in drinking water (15 µg/l [ppb]).

The table below identifies the drinking water outlets that tested above the 15 µg/l for lead, the actual lead level, and what temporary remedial action [School District Name] has taken to reduce the levels of lead at these locations.

Sample Location	**First Draw Result in µg/l (ppb)**	**Remedial Action**
Left Sink in Boys Bathroom of Church Gym	46.4	Posted signage "DO NOT DRINK- SAFE FOR HANDWASHING ONLY"
Right Sink in Boys Bathroom of Church Gym	35.7	Posted signage "DO NOT DRINK- SAFE FOR HANDWASHING ONLY"

Health Effects of Lead

High levels of lead in drinking water can cause health problems. Lead is most dangerous for pregnant women, infants, and children under 6 years of age. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. Exposure to high levels of lead during pregnancy contributes to low birth weight and developmental delays in infants. In young children, lead exposure can lower IQ levels, affect hearing, reduce attention span, and hurt school performance. At *very* high levels, lead can even cause brain damage. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults.

How Lead Enters Water

Lead is unusual among drinking water contaminants in that it seldom occurs naturally in water supplies like groundwater, rivers and lakes. Lead enters drinking water primarily as a result of the corrosion, or wearing away, of materials containing lead in the water distribution system and in building plumbing. These materials include lead-based solder used to join copper pipe, brass, and chrome-plated brass faucets. In 1986, Congress banned the use of lead solder containing greater than 0.2% lead, and restricted the lead content of faucets, pipes and other plumbing materials. However, even the lead in plumbing materials meeting these new requirements is subject to corrosion. When water stands in lead pipes or plumbing systems containing lead for several hours or more, the lead may dissolve into the drinking water. This means the first water drawn from the tap in the morning *may* contain fairly high levels of lead.

Lead in Drinking Water

Lead in drinking water, although rarely the sole cause of lead poisoning can significantly increase a person's total lead exposure, particularly the exposure of children under the age of 6. EPA estimates that drinking water can make up 20% or more of a person's total exposure to lead.

For More Information

A copy of the test results is available in our central office for inspection by the public, including students, teachers, other school personnel, and parents, and can be viewed between the hours of 8:30 a.m. and 4:00 p.m. and are also available on our website at www.eclcofnj.org. For more information about water quality in our schools, contact Randy Peterson at the HoHoKus School, [Phone Number].

For more information on reducing lead exposure around your home and the health effects of lead, visit EPA's Web site at **www.epa.gov/lead**, call the National Lead Information Center at 800-424-LEAD, or contact your health care provider.

If you are concerned about lead exposure at this facility or in your home, you may want to ask your health care providers about testing children to determine levels of lead in their blood.

Very truly yours,

Peter Petrou
Executive Director

INVESTIGATION CONDUCTED: 8/3/2021

DATE OF REPORT: 9/17/2021

(Omega Project # 21-26004)

Omega Environmental Services, Inc. 280 Huyler Street - South Hackensack, NJ 07606 - Tel: (201) 489-8700 - Fax: (201)342-5412

TABLE OF CONTENTS

EXECUTIVE SUMMARY:

The Archdiocese of Newark requested representative lead in water testing of potable water outlets at St. Luke/ECLC located at 302 N. Franklin Turnpike, Ho-Ho-Kus, New Jersey 07423.

Previous Testing

On June 16, 2016, Omega performed screen testing of all potable outlets. First draw and flush samples (30 second) were collected at forty (40) water fountains and sinks.

Reportedly the outlets were not flushed or used on the day of testing.

One (1) first draw sample and the associated flush sample result were above Lead and Copper Rule action level of 15 ppb.

See report dated July 15, 2016.

Follow-up Current Testing (8/3/2021)

In order to assess the building water outlets, follow-up testing of representative potable outlets was performed on August 3, 2021.

Reportedly all outlets were flushed the day prior to sampling.

First draw and flush samples (30 second) were collected at 40 water fountains and sinks.

Results of most (38-out-of-40 total samples) first draw samples analyzed were below the Lead action level of 15 ppb. Two (2) first draw sample results were above 15 ppb. Both of the associated flush samples were above 15 ppb.

See Section 3 Discussion of Results

Applicable Corrective Action

The positive outlets should not be used by students/staff but should continue to be flushed daily or weekly pending re-test.

Water Management/Plumbing Plan

A water management/plumbing plan has been created for St. Luke/ECLC.

Omega Environmental Services, Inc. 280 Huyler Street - South Hackensack, NJ 07606 - Tel: (201) 489-8700 - Fax: (201)342-5412

(1) EPA Lead in Copper Rule (1991) Action Level for water suppliers (municipalities and private wells) and March 2016 Newark Public Schools Lead Water Testing Sampling Plan.
FD – First Draw Sample
FL – Flush Sample (30 sec)
ND – Indicates that the analyte was not detected at the reporting limit
NA – Not Analyzed

Omega Environmental Services, Inc. 280 Huyler Street - South Hackensack, NJ 07606 - Tel: (201) 489-8700 - Fax: (201)342-5412

2 SAMPLING METHODOLOGY:

First Draw Samples - Without allowing any water to spill until sample collection, samples were collected with a relatively slow flow rate in 250 mL bottles prepared with Nitric Acid (HNO_3) as a preservative.

Flush Samples – After collection of first draw samples the water was allowed to flow at a relatively slow rate for thirty second to flush the fixture and close piping. The flush samples are intended to test the plumbing further upstream from the fixture (behind walls).

The samples were packaged in a cooler and shipped to EMSL Analytical, Inc. in Cinnaminson, NJ for total lead in potable water analysis (method E200.8 IOC).

3 DISCUSSION OF RESULTS:

Two (2) first draw sample results were above 15 ppb. Both of the associated flush samples were above 15 ppb. This indicates the source of lead is related to the main building plumbing.

4 RECOMMENDATIONS:

Short term:

- Take any outlets with elevated results out of service.
- Conduct further evaluation, flushing, and testing of outlets with elevated results.

Contact Omega Environmental to discuss specific recommendations

Long Term:

- **If additional testing shows similar results (first draw results above 15 ppb) consider replacing the spout of the fountains (may contain brass, adding to lead levels), installing filters (if practical), or fixture replacement.**
- Repeat full building testing on an annual basis. Generally, this should be performed in August prior to the start of the school season.
- Develop a Lead in Water Management Plan in accordance with the 2006 EPA 3Ts for Reducing Lead in Drinking Water in Schools.

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 8/10/2021. The results are tabulated on the attached data pages for the following client designated project:

Arch of Newark/St. Luke ECLC / 21-26004

The reference number for these samples is EMSL Order #012109114. Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact me at (856) 303-2500.

Approved By:

Phillip Worby, Environmental Chemistry
Laboratory Director

The test results contained within this report meet the requirements of NELAP and/or the specific certification program that is applicable, unless otherwise noted.
NELAP Certifications: NJ 03036, NY 10872, PA 68-00367, CA ELAP 1877

The samples associated with this report were received in good condition unless otherwise noted. This report relates only to those items tested as received by the laboratory. The QC data associated with the sample results meet the recovery and precision requirements established by the NELAP, unless specifically indicated. All results for soil samples are reported on a dry weight basis, unless otherwise noted. This report may not be reproduced except in full and without written approval by EMSL Analytical, Inc.

Analytical Results

Definitions:
MDL - method detection limit
J - Result was below the reporting limit, but at or above the MDL
ND - indicates that the analyte was not detected at the reporting limit
RL - Reporting Limit (Analytical)
D - Dilution Sample required a dilution which was used to calculate final results
